INTRODUCTION

Thank you for purchasing FontSet 1. FontSet fonts are fonts designed to work in the *AMIGA* environment and are tuned for dot matrix printers. They can be used in place of your current fonts or in addition to them (space allowing).

GENERAL INSTRUCTIONS

Within these instructions, there will be references to the Command Language Interface (CLI). If you are unfamiliar with the CLI, please refer to the section: *How to use the CLI.*

MAKING A BACKUP

You should always make a backup copy of your FontSet1 disk for safekeeping. Be sure to read the licence agreement enclosed in the FontSet1 package. When making a backup copy of FontSet1, always write-protect your source disk. In a two drive configuration, use CLI and type:

```
1> FontSet1:Diskcopy df0: to df1:
```

and hit [return]. In a single drive configuration, use CLI and type:

```
1> FontSet1:Diskcopy df0: to df0:
```

and hit [return]. The diskcopy utility will provide the necessary prompts.

USING FONTSET1 FONTS

To use only FontSet1 fonts, enter CLI and type:

```
1> FontSet1:assign fonts: FontSet1:fonts
```

This needs to be done every time the system is booted.

ADDING FONTSET1 FONTS TO ANOTHER DISK

To add FontSet1 fonts to your normally used fonts: directory, enter CLI and type:

```
1> FontSet1:copy FontSet1:fonts to fonts: all
```

ADDING SPECIFIC TYPEFACES TO ANOTHER DISK

To add all sizes of a specific font (eg. Times) to your normally used fonts: directory, enter CLI and type:

```
1> FontSet1:MakeDir fonts:Times
1> FontSet1:Copy FontSet1:fonts/Times.font to fonts:
1> FontSet1:Copy FontSet1:fonts/Times to fonts:Times all
```

USING THE MAKEFONT UTILITY

The MakeFont utility allows you to make new sizes of existing fonts in your *fonts:* directory. For example you can make the Freeform 48 point font from the Freeform 24 point font included on the FontSet1 disk. To start the utility, double–click on the MakeFont icon, or type **FontSet1:MakeFont** from CLI. You will need to specify the name and size of the original font, and the destination font. The MakeFont program will then do the following:

1. Make a scaled copy of the original font in the current font directory.
2. Alter (or create if necessary) the '.font' file so that AmigaDos 'knows' about the new font.

HOW TO USE THE COMMAND LANGUAGE INTERFACE (CLI)

To Enter CLI, make sure CLI is enabled in Preferences in your normal startup disk (this is normally your *workbench* disk); double–click the *Systems* drawer; double–click the CLI icon. To Exit CLI, type 'EndCLI' at the CLI prompt (1>). All commands in the CLI are terminated by the [return] key.

This manual was writtten, edited and composed on the Gold Disk Desktop publishing system, using an AMIGA computer, PageSetter Desktop Publishing software, and PageSetter LaserScript. Proofs and final pages were printed on a QMS PS800 PostScript laser printer.

At Gold Disk, we are committed to providing the best technical support possible.

The most important thing that you as a purchaser of Gold Disk products can do is to promptly send in the registration card enclosed. This will automatically entitle you to receive information on upgrades and bulletins about our products, as well as access to our technical support phone number.

Please inform us of any problems, suggestions, or enhancements you may have. This will allow us to share your comments with other users and act on them as necessary. Taking advantage of this direct channel will help us keep our committment.

Disclaimer

Much care has been taken in preparing the manual and software contained on this disk. However, GOLD DISK INC. makes no expressed or implied warranty of any kind with regard to these programs, nor the manual. In no event shall GOLD DISK INC. be liable for incidental or consequential damages in connection with or arising out of the furnishing, performance or use of these programs or manual. GOLD DISK INC. reserves the right to alter or update any program, publication or manual from time to time without obligation to notify any person of such changes.
